- Installation and configuration of Switches
- Router installation
- Installing traditional and Next Generation Firewalls
- IP Telephony solutions

WIRELESS AND CABLED NETWORKS WORK TOGETHER

We can efficiently run network cabling from your router to weak signal areas in your property. With network sockets in place, you can either plug directly into the network for the ultimate in speed, or even install a wireless access point at the new socket to add the convenience of wi-fi in places that had none before.

- Point to Point Wireless Links (building to building links where cables are not a viable option due to restricted access)
- Indoor Fixed Wireless Access for offices, banks, retail, pubs, clubs, bars and restaurants.
- Outdoor WiFi covering caravan parks and holiday parks
